

Daher designed and operates a new

15.000 m² platform in Poincy (FR77)

(Le Havre – September 2008) Daher has built a 15,000 m² platform compliant with the technical and safety requirements for the storage of chemical products (SEVESO 2 installation)

15,000 m² of secure warehouses for the storage of toxic or flammable substances

This platform includes a 1,500 m² unit for the warehousing of toxic products and 600 m² equipped with an independent water reservoir and explosion-proof materials for the storage of flammable products. Overall, four completely isolated units, with fire protection systems ensure both the storage of hazardous substances (flammable, toxic and corrosive) and more standard chemicals such as those used for the manufacturing of cosmetics.

16 loading/unloading platforms ensuring a high rotation rate of platform stock

The shuttle transports approximately 300 pallets received on a daily basis, i.e. 50,000 tonnes per year stored in over 14,000 different locations.

Further to Poincy storage site audit, a storage contract has been recently signed with the worldwide leader in speciality chemistry.
