

OLIGO FUEL SYSTEM Mobile containerised fuelling station

"Refuel anywhere safely"

DAHER expands its product range with integrated containers for the Petrochemicals, Defence and Aerospace sectors

(Le Havre - July 2008) The acquisition of Oligo, a company specialised in the design, modification and integration of shipping containers, bolsters DAHER's know-how in engineering and services for the petrochemical industry, while also enhancing its product offer with a range of integrated containers for the Chemicals, Defence and Aerospace sectors.

Enhance expertise

With extensive experience in the fitting and integration of shipping containers, Oligo brings DAHER additional expertise in the design, modification, lay-out and integration of containers for logistic and industrial applications. It also sells large volumes of new and used shipping containers.

A flagship product: the mobile fuelling station

Among the integrated containers developed by Oligo are mobile service stations. These can be used to refuel any type of air or land vehicles, and offer industrial groups a practical solution for storing and delivering any type of fuel (diesel, unleaded, Jet A1, Avgas, Kerosene, etc.).

A product suitable for all of the sectors we are specialized in

These mobile service stations are safe, entirely self-sufficient and compliant with international regulations and environmental standards. They can be used in any situation: in fields of operations, for land vehicle sourcing, on permanent or temporary airbases for aircrafts and helicopters, in areas subject to environmental restrictions, at the scene of an event or to support an existing petroleum network.
